Professional Summary

Results-driven Engineering student with hands-on experience in cloud data pipelines, relational database systems, and full-stack application development. Proficient in Java, SQL, and AWS (Certified Cloud Practitioner). Built real-world projects spanning serverless data automation on AWS and a production-grade DBMS with complex SQL design. Passionate about data engineering, cloud infrastructure, and solving real-world problems through scalable, end-to-end systems.

Education

Bachelor of Engineering – Electronics and Communication Engineering Karpagam Institute of Technology, Coimbatore	2023 – Present CGPA: 7.9
Higher Secondary Certificate (HSC) Schaffter Higher Secondary School, Tirunelveli	2021 – 2023 Percentage: 83%
Secondary School Certificate (SSLC) Socratees Matriculation School, Tirunelveli	2020 – 2021 Percentage: 91%

Skills

Programming Java, Python, SQL	Web Technologies HTML, CSS, JavaScript
Cloud & AI AWS, Hugging Face, Serverless	Tools VS Code, Canva, Antigravity

Certificates

- AWS - AWS Certified Cloud Practitioner (CLF-C02)
- Udemy - Mastering AWS Serverless – Hands-On
- HackerRank - SQL (Basic + Intermediate)
- Scaler Topics - Object Oriented Programming (OOPS) in Java
- HackerRank - Java

Projects

Serverless Sales Data Pipeline — AWS

- Built an event-driven automation pipeline utilizing S3, Lambda, DynamoDB, and Athena to auto-process CSV sales datasets.
- Implemented structured storage of transformed records alongside automated SQL analytics tasks using tight IAM security privileges.

AuraMed Diagnostics — Full-Stack DBMS Web Application

- Built a decoupled client-server medical records system using Java HttpServer, MySQL, and a vanilla JS single-page application with REST API endpoints for full CRUD operations.
- Designed a normalized 5-table relational schema with SQL triggers for data validation and complex JOIN queries for patient diagnostic reporting.

Vryon – AI-Powered Virtual Try-On E-Commerce Platform

- Designed and deployed a full-stack virtual try-on platform featuring a Python backend and a responsive user frontend.
- Integrated Hugging Face IDM-VTON to deliver real-time AI garment rendering with end-to-end infrastructure ownership.

Achievements

- **International Conference Presentation** – Presented research findings at the 7th International Conference on Soft Computing and Signal Processing (ICSCSP-2024), hosted by Malla Reddy College of Engineering & Technology.
